★ **Asymptotics, nonparametrics, and time series.**

A tribute to Madan Lal Puri.

Edited by Subir Ghosh.

Statistics: Textbooks and Monographs, 158.

Marcel Dekker, Inc., New York, 1999. xviii+833 pp. \$225.00.

ISBN 0-8247-0051-1

Contents: Subir Ghosh and George G. Roussa [George G. Roussas], Madan Lal Puri: life and contributions of a mathematical statistician (xv–xviii); David R. Brillinger, Some examples of empirical Fourier analysis in scientific problems (1–36); Robert B. Lund and Ishwar V. Basawa, Modeling and inference for periodically correlated time series (37–62); Richard A. Davis [Richard Alan Davis], Ying Wang and William T. M. Dunsmuir, Modeling time series of count data (63–113); Josu Arteche and Peter M. Robinson, Seasonal and cyclical long memory (115–148); Dag Tjøstheim, Nonparametric specification procedures for time series (149–199); R. J. Bhansali, Parameter estimation and model selection for multistep prediction of a time series: a review (201–225); Robert H. Shumway, Sung-Eun Kim and Robert R. Blandford, Nonlinear estimation for time series observed on arrays (227–258); T. Subba Rao and W. K. Wong [Woon Wong], Some contributions to multivariate nonlinear time series and to bilinear models (259–294); Marc Hallin and Bas J. M. Werker, Optimal testing for semi-parametric AR models—from Gaussian Lagrange multipliers to autoregression rank scores and adaptive tests (295–350); Masanobu Taniguchi, Statistical analysis based on functionals of nonparametric spectral density estimators (351–394); Anton Schick, Efficient estimation in a semiparametric additive regression model with ARMA errors (395–425); Wolfgang Wefelmeyer, Efficient estimation in Markov chain models: an introduction (427–459); B. L. S. Prakasa Rao, Nonparametric functional estimation: an overview (461–509); Omer Ozturk, Thomas P. Hettmansperger and Jurg Husler, Minimum distance and nonparametric dispersion functions (511–531); J. Antoch and M. Huskova, Estimators of changes (533–577); Arnoud C. M. van Rooij and Frits H. Ruymgaart, On inverse estimation (579–613); Alan E. Gelfand, Approaches for semiparametric Bayesian regression (615–638); S. Ghosal [Subhashis Ghosal], J. K. Ghosh and R. V. Ramamoorthi, Consistency issues in Bayesian nonparametrics (639–667); Gutti Jogesh Babu, Breakdown theory for estimators based on bootstrap and other resampling schemes (669–681); S. N. Lahiri, On second-order properties of the stationary bootstrap method for Studentized statistics (683–711); Rabi Bhattacharya and Mukul Ma-

jumdar, Convergence to equilibrium of random dynamical systems generated by i.i.d. monotone maps, with applications to economics (713–741); Kamal C. Chanda, Chi-squared tests of goodness-of-fit for dependent observations (743–756); George G. Roussas, Positive and negative dependence with some statistical applications (757–788); Bruce G. Lindsay and Richard Waterman, Second-order information loss due to nuisance parameters: a simple measure (789–810); Appendix: the publications of Madan L. Puri (811–828).

{The papers that appear to be in final form are being reviewed individually.}
